D.W.C.=The approximate deadweight capacity in tons, of 2,240lbs., for cargo and bunkers of the vessel when loaded in salt water to the summer freeboard.

P.B.=The approximate capacity in cubic feet of the permanent bunkers, measured to outside of frames, to top of ceiling, and to underside of beams.

GRAIN CAPACITY.=The capacity of cargo spaces, in thousands of cubic feet, measured to outside of frames, to top of ceiling, and to top of beams, including hatchways.

BALR OR COTTON CAPACITY.=The capacity of cargo spaces, in thousands of cubic feet, measured to inside of cargo battens, to top of ceiling, and to underside of beams, including hatchways.

IN REFRIGERATED VESSELS the capacities of cargo spaces are taken after fitting insulation.
